

Excerpt from A Modern City: Providence, Rhode Island and Its Activities This book aims to present the physical characteristics, the racial elements, the commercial and industrial growth, the labor conditions, and the governmental, financial, educational, aesthetic, philanthropic, and religious activities of a typical American city. Providence, with its favorable location, its historical associations, its growing population, and its expanding trade, offers a most inviting field to the student of municipal life, and may be taken as fairly representative of the average city struggling toward the light. Frequent comparisons between conditions in Providence and those existing elsewhere are made merely to bring out more prominently the principal features in the development of the second city in New England. The purpose is not to discuss theories or principles of municipal administration, or to present an exhaustive array of facts, but to describe as clearly as possible what a modern city does, and how it does it. The work is not intended as a complete description of any one city, but as a survey of its distinctive characteristics. The editor sends forth these results of an investigation extending over a period of more than a year with the earnest hope that they will be followed by similar studies of other important centers, until sufficient material is at hand to make possible reasonably safe generalizations. If the facts here presented throw any additional light on the problems of the city, or meet the needs, to some degree at least, of those readers in various parts of the country who wish to learn how one of the oldest and most important industrial centers is endeavoring to solve its difficulties and improve its opportunities, the efforts of the collaborators will not have been in vain. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
