INTRODUCTION - Are you a grown up?... Depends. The words grown up spell more than they say and can come across as meaning many things to many people depending on what social circle the question is asked. Many a person thinks they are an adult or a grown up, they expect to be seen and regarded as such only to encounter certain people or social groups who just won't buy it. That you are regarded as an adult in the United States for example is not a guarantee that you are going to be seen in that light in a different country. Many who are aware of this nuance try to blend in as perfect a way as possible to the code of conduct of persons seen and regarded as grown ups or mature, this method however is not always successful, and as you would find out through the pages of this book, there actually are certain traits and factors that are common across regions and boundaries to individuals that are regarded as grown ups. The most common generally accepted trait of a grown up is their age, but as you may well know its not easy to point accurately to a strangers exact age unless you saw or knew something about their birth date. People look to certain definite traits on the appearance of an individual to mentally deduce their age bracket, such traits that give definite clues about age also give clues on a lot of other things about a person. Identifying traits that point to maturity and leveraging those traits in a way that is of advantage to you the reader is the concern and subject matter of this book.....
